

# Idling gets you nowhere!

**Parked  
and idling?**

**Turn off  
your engine.**

10 seconds of idling uses more  
gas than restarting your engine.

**Be clean. Be healthy. Be green. Be idle free.**

## **Get the Facts** **Start now by turning off your engine** **when your vehicle is parked.**

- Idling your engine for more than 10 seconds uses more fuel and causes more greenhouse gas emissions than turning it off and restarting it.
- Restarting your engine many times has no significant impact on the starter.
- With today's modern engines and oils, driving your vehicle is the best way to warm it up. Usually no more than 60 seconds of idling is needed on cold winter days, provided your windows are de-iced.
- Unnecessary idling produces greenhouse gas emissions that contribute to climate change. Climate change will result in more frequent heat waves and potentially cause a deterioration of air quality.
